

PRESS RELEASE

Green and healthy lawns every time

Neudorff is pleased to introduce Cleanlawn, a convenient and environmentally friendly way to protect against lawn weathering with an indirect action against moss.

The latest addition to Neudorff's lawn care range features a 3-in-1 organic formula and contains only natural raw materials, including beneficial Mycorrhiza fungi to increase the size of the root system by up to 150 x and make it resilient to drought, frost and unfavourable PH levels.

CleanLawn's natural formula ensures that plant cycles are not disturbed and there is no risk of it scorching the lawn. Its soil restoring microorganisms work hard to disrupt unhealthy bacteria and promote the growth of thick green shoots and break down lawn thatch and moss growth, leaving behind a green, healthy lawn without the need for scarifying.

Whether your lawn is newly laid or not, the fast-acting organic compound fertiliser (NPK 9-3-5) continues to feed for up to 100 days after the first application and is suitable for use in spring, summer and autumn. The formula is granulated and easy to spread across the lawn either by hand or with a spreader.

CleanLawn is available in large 20 kg bags and covers 400m², which is double the coverage of other similar products available on the market. RRP £37.99
