

It's time to prepare your lawn for winter

A new organic fertiliser that promises a lush green lawn that's beautifully thick and hard-wearing is now available in the UK.

Did your lawn look pale and patchy last spring? Then you should act now, in order to enjoy a healthy, great-looking lawn next spring.

Severe frosts in winter are highly stressful for your lawn.

If the lawn is frozen and covered in ice for weeks, it will have difficulties in growth next spring – especially if it has been damaged by drought in the summer before and poorly cared for. Snow mould, a fungal lawn disease, may then spread and lead to a yellowish, spotty lawn.

To ensure your lawn survives the winter in a healthy condition, it is necessary to strengthen it at the end of the summer. It primarily needs potassium, nitrogen and phosphorous as well as trace elements for optimal development. These essential ingredients are all contained in Neudorff's Organic Lawn Feed & Improver which consists of purely natural raw ingredients.

An almost "magic" ingredient that makes Neudorff's Organic Lawn Feed & Improver so valuable to a stressed lawn is MyccoVital®. This is a unique combination of naturally occurring mycorrhiza fungi and soil-revitalising micro-organisms that ensures particularly strong and healthy roots and plants. The

mycorrhiza fungi increase the surface area of the roots by up to 150 times. As a result, they are able to absorb water and nutrients more effectively.

Organic Lawn Feed & Improver provides thicker blade growth with a minimal increase in blade length which has the beneficial effect of suppressing the growth of moss and weeds.

Neudorff's Organic Lawn Feed & Improver is child and pet safe, and the treated areas can be used immediately after application. Like all Neudorff fertilisers, it is extremely well tolerated by plants meaning that there is no risk of "fertiliser burn" when used correctly.

The product is granulated so it can easily be spread evenly using a scatter cart or even by hand.

Neudorff have specialised in the development of natural products for the home and garden for more than 150 years and this product has been successfully on sale in Europe, ahead of its British introduction.

The Organic Lawn Feed & Improver is £6.99 for 2.5kg (RRP) and is available in all good garden centres across the country. For more information please visit www.neudorff.co.uk.
