

## The new, organic way to a moss-free lawn

For the 2014 gardening season, Neudorff introduces an effective and organic way to fight moss in lawns: the *Organic Moss Control for Lawns Concentrate*\*.

Moss in lawns often occurs in compacted or waterlogged soil, very shady areas or when the soil is too acidic. In order to fight moss sustainably these causes need to be eliminated. To then have a chance to re-expand and grow healthily again, lawns need to be moss-free.

*Organic Moss Control for Lawns\** is a non-selective moss killer with contact action for use on lawns and turf. The biodegradable\*\* product fights moss effectively and in an environmentally friendly way. Its active ingredient is pelargonic acid which also occurs naturally in plants. This ingredient guarantees fast visible results without harming the lawn. The moss turns brown quickly and can easily be raked out of the lawn.

*Organic Moss Control for Lawns\** can easily be applied with a watering can. It works even at low temperatures and doesn't leave any brown rust stains on stepping stones that have accidentally been hit. Once the product has dried, pets can be released onto treated areas without concern.
