

Optimal care for orchids

Orchids range among the most popular houseplants. With their fantastic blooms they bring a little of the exotic of rainforests into our homes.

For the optimal care of these sensitive plants Neudorff has developed two special products based on natural ingredients.

The *Organic Orchid Feed* is of 100% vegetable origin. It is particularly low in salts and is therefore ideal for salt sensitive roots. It provides all essential main and trace elements, vitamins, enzymes and growth-promoting substances which strengthen the plants and promote flower formation.

With its abundance of valuable ingredients the feed also supplies the micro-organisms in the soil with vital nutrients. This stimulates the soil and reduces the risk of unilateral propagation of harmful fungi. Results show that plants treated with *Organic Orchid Feed* provide abundant flowers for the entire season.

The *Orchid Vitaliser* contains a variety of different plant extracts. It promotes vital growth of the sensitive orchid and its formation of flowers. It acts as a mist and is sprayed directly on to the leaves. This

improves the micro-climate around the plants that prefer a high level of humidity. It does not leave any lime spots on the leaves and poses no risk to humans and pets.

Both products are available in good garden centres.

Neudorff has specialised in the development and production of natural gardening products for more than 150 years. Our company ethos is to combine market leading efficacy with the best possible degree of compatibility with humans, animals and the environment.
