March 2021

Get tough on weeds with Neudorff's long-lasting WeedFree Plus

With a warming world extending the season for weed growth as global climate change accelerates, gardeners can now effectively control tough invaders without resorting to chemicals, thanks to Neudorff's fast-acting, glyphosate-free weedkiller, WeedFree Plus.

Warm springs and mild, wet autumns across much of the UK are creating ideal conditions for weeds to burst into growth earlier than normal and carry on growing as late as early winter. Last year, the UK recorded its sunniest spring since records began in 1929, clocking-up over 570 hours of sunshine, while October 2020 was the fourth warmest in more than 140 years – with a single October day confirmed as the wettest ever.

Thankfully, Neudorff's WeedFree Plus ready-to-use and WeedFree Plus Concentrate have the power to help gardeners wipe out the most stubborn of weeds that are being spurred into growth by warm, wet conditions, such as ground elder and dandelion, with results visible just one day after treatment. Both products offer long-lasting protection against weed regrowth, too.

Left untreated, weeds compete with flowers, fruit and vegetables, robbing plants of precious water, nutrients and light – while infestations will multiply if weeds are allowed to flower and set seed. Traditional time-consuming and labour-intensive controls such as hoeing can have a limited effect, as weed roots are not removed from the soil and will quickly spring back into life.

With the tide turning against chemicals and gardeners seeking alternatives to glyphosate-based weedkillers, Neudorff is harnessing the power of two active ingredients to deliver responsible, effective weed control. The first active ingredient in WeedFree Plus is pelargonic acid which also occurs naturally in pelargoniums. The fatty acid destroys the cell walls of weed leaves, causing foliage to dry out, working in harmony with the second ingredient, maleic hydrazide, a growth regulator that effectively stops weed roots from functioning. For best results, weeds should be thoroughly drenched. It's safe for pets to enter treated areas after the spray has completely dried.

A 750 ml spray bottle of WeedFree Plus ready-to-use has an RRP of £6.99 while WeedFree Plus Concentrate has an RRP of £19.99. For more information visit www.neudorff.co.uk or find online stockists on www.neudorff.co.uk/stockists.html.

Neudorff, experts in natural gardening since 1854, is one of the few companies worldwide to develop its own plant protection and plant care products, with the widest range of products certified by the Organic Farmers and Growers' Association. Since entering the UK market in 2012, the company has built-up an enviable reputation for offering the highest quality gardening products that are gentle to people, pets and the environment.
