**March 2021**

## **Neudorff leads the way in banishing the menace of tunnelling ants**

Ants – they're the bane of peoples' lives during the warmer months! As the mercury rises each spring, their characteristic hollowing-out of gaps in between paving slabs around the house and on terraces begins in earnest. Even the smallest crack in hard standings can quickly become an eyesore as ants' tunnelling leaves an unsightly mess.

The good news is that infestations of ants around the house on paths, patios and terraces can be quickly brought under control with Neudorff's **AntFree Ant Killer Granules**. This innovative ant killer uses a natural active ingredient, while the product is certified by the Organic Farmers & Growers' Association (OF&G), providing people with added peace of mind.

What really makes AntFree Ant Killer Granules stand out from the crowd is the pioneering manner in which the formula quickly and effectively targets these unwanted invaders. The result is an enhanced level of control, providing users with two application options to ensure that nests are tackled with ease.

For ultimate control, the granules should be dissolved in water and applied with a watering can. This method is highly effective, ensuring that the treatment penetrates deep down into ants' nests, thereby targeting insects that do not have access to the surface. This soil drenching method ensures that the nest is killed quickly and effectively, rather than simply targeting insects at the surface. To achieve maximum levels of control, Neudorff advises drenching nests early in the morning, taking care to ensure that the solution penetrates all cracks and joints close to the nest when the treatment is being applied.

However, Neudorff recognises that in today's busy world, households can demand even quicker application techniques, and that's why AntFree Ant Killer Granules can also be scattered straight from the pack, providing effective control of infestations.

Guy Jenkins, Consumer Manager at Neudorff's UK distribution Partner, DLF Seeds Ltd, said: "With ongoing restrictions curtailing everyday life due to the Covid-19 pandemic, the reality is that many of us will be spending another summer at home, with outdoor spaces providing a lifeline for our mental and physical health. The menace of ants tunnelling on patios, terraces and hard standings around the house leaves an unsightly mess in outdoor living areas and left untreated, paths and terraces can become slippery due to excavated debris. Neudorff's AntFree Ant Killer Granules are versatile and easy to use and, when applied as a liquid solution, effectively kills nests deep underground, ensuring that the ant problem is dealt with once and for all."

AntFree Ant Killer Granules specifically targets ants by using the natural ingredient pyrethrins, derived from *Chrysanthemum cinerariaefolium* extract. A 500g shaker can of AntFree Ant Killer Granules has an RRP of £6.49. For more information visit [www.neudorff.co.uk](http://www.neudorff.co.uk) for details.
